Last-Mile KPI Reference — Sheet to Formula

The most important metrics from the summary tabs of the real "Dark Store Control Tower" workbook, each with its live sheet value and the plain-English formula behind it — for engineering reference when rebuilding these KPIs in the WMS.

Shiprocket WMS · Sheet Reference

KEY PATTERN Almost every percentage on these tabs follows the same shape: **(count of orders meeting a condition) ÷ (total orders) × 100**. Combined Dark Store + 3PL rows add the two channels' raw counts first and divide once — they never average two already-computed percentages.

SECTION 1 — COMBINED NETWORK

Dark Store + 3PL Overall

Sheet tab '✔ | DS+3PL_Overall' — every row here is the Dark Store value plus the 3PL value, added once and divided once (never a weighted average of two percentages).

Overall_Orders

COUNT

✔ | DS+3PL_Overall · row 9

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1,852	13,064	11,522

FORMULA

Total Orders = Dark Store Orders + 3PL Orders

Overall_Open_Orders

COUNT

✔ | DS+3PL_Overall · row 10

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1,769	1,806	3,023

FORMULA

Open Orders = Dark Store Open Orders + 3PL Open Orders

Overall RTO%

PERCENT

✔ | DS+3PL_Overall · row 11

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
0.1%	8.7%	5.3%

FORMULA

RTO % = (Dark Store RTO Orders + 3PL RTO Orders) ÷ (Dark Store Orders + 3PL Orders) × 100

Overall_SLA%

PERCENT

✔ | DS+3PL_Overall · row 12

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.0%	58.5%	57.8%

FORMULA

SLA % = (Dark Store Orders Within SLA + 3PL Orders Within SLA) ÷ (Dark Store Orders + 3PL Orders) × 100

Overall_Delivery%

PERCENT

✔ | DS+3PL_Overall · row 13

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.1%	77.3%	68.3%

FORMULA

Delivery % = (Dark Store Delivered Orders + 3PL Delivered Orders) ÷ (Dark Store Orders + 3PL Orders) × 100

Del within SLA

PERCENT

✔ | DS+3PL_Overall · row 14

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.0%	53.9%	52.3%

FORMULA

Delivered Within SLA % = (Dark Store Orders Delivered Within SLA + 3PL Orders Delivered Within SLA) ÷ (Dark Store Orders + 3PL Orders) × 100

Pulls from a different raw flag than 'SLA %' above — SLA % tracks the assignment/dispatch promise, this tracks the end-customer delivery promise. The two numbers are allowed to disagree.

FASR

PERCENT

✔ | DS+3PL_Overall · row 15

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.1%	72.5%	64.7%

FORMULA

First Attempt Success Rate % = (Dark Store First-Attempt Deliveries + 3PL First-Attempt Deliveries) ÷ (Dark Store Orders + 3PL Orders) × 100

Combined KPIs are never built by averaging the two channels' percentages — the sheet always adds raw counts first and divides once. Worth mirroring this when the mock data is rebuilt.

SECTION 2 — DARK STORE CHANNEL

Dark Store Overall

Sheet tab '✧ | DS_Overall' — Dark-Store-only order count is the denominator for every ratio below.

Overall_Orders

COUNT

✧ | DS_Overall · row 9

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1,388	10,502	9,425

FORMULA

Dark Store Orders = Count of Orders Dispatched From Dark Stores Today

Assigned within Cutoff

COUNT

✧ | DS_Overall · row 10

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1,388	10,443	9,425

FORMULA

Assigned Within Cutoff (count) = Orders Where Assignment Time ≤ Assignment Cutoff Time

Assigned-Within-Cutoff % (first principles) = Assigned Within Cutoff ÷ Dark Store Orders × 100 — not pre-built as a % in the sheet, but it follows the same divide-by-orders pattern as every row below.

Picked within EDD

COUNT

✧ | DS_Overall · row 11

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
988	10,136	9,268

FORMULA

Picked Within EDD (count) = Orders Where Picked Time ≤ EDD (Estimated Dispatch Date)

Picked-Within-EDD % = Picked Within EDD ÷ Dark Store Orders × 100.

Misroute_Orders

COUNT

✧ | DS_Overall · row 12

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
0	0	0

FORMULA

Misroute Orders (count) = Orders Flagged as Sent to the Wrong Store Today

Misroute % = Misroute Orders ÷ Dark Store Orders × 100. Every value in this snapshot is 0 — worth confirming the flag is actually being populated upstream and not silently stuck at zero.

Overall_SLA%

PERCENT

✧ | DS_Overall · row 13

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.9%	51.4%	54.9%

FORMULA

SLA % = Orders Delivered Within SLA ÷ Dark Store Orders × 100

Overall_Delivery%

PERCENT

✧ | DS_Overall · row 14

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
5.0%	74.5%	67.9%

FORMULA

Delivery % = Delivered Orders ÷ Dark Store Orders × 100

Del within SLA

PERCENT

✧ | DS_Overall · row 15

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
4.9%	46.9%	49.1%

FORMULA

Delivered Within SLA % = Orders Delivered Within SLA Window ÷ Dark Store Orders × 100

FASR

PERCENT

✧ | DS_Overall · row 16

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
5.0%	70.0%	64.3%

FORMULA

First Attempt Success Rate % = First-Attempt Deliveries ÷ Dark Store Orders × 100

RASR

PERCENT

✧ | DS_Overall · row 17

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
–	13.4%	9.3%

FORMULA

Repeat Attempt Success Rate % = Orders Delivered Successfully on a Repeat Attempt ÷ Orders That Needed a Repeat Attempt × 100

⚠ Data-quality flag found in the live sheet: today's daily formula for this cell is broken (#REF! error, shows '–'). Only the weekly/monthly roll-ups actually compute — don't copy the broken daily reference if this KPI gets rebuilt.

SECTION 3 — 3PL CHANNEL

3PL Overall

Sheet tab '♀ | 3PL_Overall' — 3PL-only order count is the denominator for every ratio below.

Overall_Orders

COUNT

♀ | 3PL_Overall · row 9

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
464	2,562	2,097

FORMULA

3PL Orders = Count of Orders Routed to 3PL Couriers Today

Assigned Orders

COUNT

♀ | 3PL_Overall · row 10

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
464	2,558	2,097

FORMULA

Assigned Orders (count) = Orders Where Courier Assignment Time ≤ Assignment Cutoff Time

Picked Orders_Within SLA

COUNT

♀ | 3PL_Overall · row 11

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
44	2,434	2,072

FORMULA

Picked Within SLA (count) = Orders Where Courier Pickup Time ≤ Pickup SLA Time

Picked Orders_Overall

COUNT

♀ | 3PL_Overall · row 12

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
44	2,533	2,072

FORMULA

Picked Orders (count) = Orders Where a Pickup Time Exists, Regardless of Whether It Beat the SLA

Picked-On-Time % = Picked Within SLA ÷ Picked Orders (Overall) × 100 — the sheet keeps these as two raw counts rather than one ratio, so the on-time pickup rate has to be derived.

Open Orders

COUNT

♀ | 3PL_Overall · row 13

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
457	169	559

FORMULA

Open Orders = 3PL Orders − 3PL Orders That Reached a Final Status (Delivered, RTO or Lost)

RTO

PERCENT

♀ | 3PL_Overall · row 14

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
0.0%	4.5%	3.1%

FORMULA

RTO % = RTO Orders ÷ 3PL Orders × 100

Missed Orders

COUNT

♀ | 3PL_Overall · row 15

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
0	424	503

FORMULA

Missed Orders (count) = Total Dark-Store-Eligible SKU Lines − SKU Lines Actually Fulfilled From a Dark Store

Really a channel-leakage metric, not a 3PL failure metric — it counts orders that could have shipped from a Dark Store (faster, cheaper) but leaked to 3PL instead. Same idea as the 'Missed Opportunity' KPI in the business artefact, just measured from the 3PL side.

Overall_SLA%

PERCENT

♀ | 3PL_Overall · row 16

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1.5%	87.3%	70.9%

FORMULA

SLA % = Orders Delivered Within SLA ÷ 3PL Orders × 100

Courier_SLA%

PERCENT

♀ | 3PL_Overall · row 17

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1.5%	88.8%	72.1%

FORMULA

Courier SLA % = Orders Delivered Within the Courier Partner's Own Committed TAT ÷ 3PL Orders × 100

Pulled from a different raw column than 'SLA %' above — the sheet separates 'our promise to the customer' from 'the courier's promise to us'; so the two percentages can and do disagree.

Overall_Delivery%

PERCENT

♀ | 3PL_Overall · row 18

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1.5%	88.8%	70.1%

FORMULA

Delivery % = Delivered Orders ÷ 3PL Orders × 100

Del within SLA

PERCENT

♀ | 3PL_Overall · row 19

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1.5%	82.7%	66.8%

FORMULA

Delivered Within SLA % = Orders Delivered Within SLA Window ÷ 3PL Orders × 100

FASR

PERCENT

♀ | 3PL_Overall · row 20

Today (Thu, maturing)	Last Full Week (Wk 40)	Month-to-Date (Oct '26)
1.5%	82.8%	66.5%

FORMULA

First Attempt Success Rate % = First-Attempt Deliveries ÷ 3PL Orders × 100
